(54) Title: BATTERY HOLDER

(57) **Abstract:** The invention relates to a battery holder 30 for an electronic device. In order to provide an improved possibility of exchanging a battery of an electronic device, it is proposed that the battery holder 30 comprises an outer surface 31, means 32 for receiving an exchangeable battery 20 and means 33, 34 for connecting the battery holder 30 releasably to an electronic device. The latter means enable a connection of the battery holder to the electronic device in a way that electrical contact elements 21 of a battery 20 received by said battery holder 30 come into contact with electrical contact elements of the electronic device and that the outer surface 31 of the battery holder 30 forms part of the outer surface of the electronic device. The invention relates equally to a corresponding electronic device and to a cover for such an electronic device.
